

My Trip to the National Museum of Science and Industry!

When I drove to Chicago with my family, we went to the National Museum of Science and Industry. First we saw a Harry Potter exhibit. Now I'm reading all the books! I saw the train that Harry and Ron road on. It was exciting! There were other trains too. They were awesome. There was also an enormous play place. One part shows you what happens when you flush your toilet or turn on your sink.

In one room there were buildings made out of Lego. There were funny mirrors and I spy objects behind glass. When we went in the room with robots, you could race them writing friends. They beat me, but I touched the walls. I think they were cheaters! We saw animals, weird machines, and an army boat. There was also an exhibit on mining. I walked on a plane that was hanging from the ceiling.

We went to eat. I had Fettuccine Alfredo. The museum was exhilarating and I didn't want to leave! When my mom made us, I was tired. I hope we go back again!
